

CAPITA CS PREMIER PARTNER

We identified that CURA was the perfect system for us to record issues regarding safeguarding matters electronically. Our previous method was using paper files, which were difficult to manage, reference and were restricted to educational purposes only.

CURA keeps everything in one place, uses chronologies and makes everything easily accessible. Now we can complete file audits, use the alerts system when new concerns come through and access information for all of the school - even when working remotely. Cost and support are fantastic too.

Katy Gill, Network Manager  
Stour Academy

Police recorded almost 9,500 offences of cruelty and neglect against children last year.

NSPCC (2015) How safe are our children?

In 2012/13 NSPCC helpline advisors responded to nearly 51,000 contacts from adults concerned about a child. More than half of these were serious enough to warrant referral to local police or children's services for further investigation.

# CURA – Recording incidents and concerns for children and vulnerable people.

Safeguarding our children and vulnerable people is paramount. Securely logging, tracking and dealing with children and vulnerable persons data is vital in trusted environments to ensure the safety and welfare of our most exposed.

Paper based systems, individual documents on segregated software programs, can cause communication failures, secure data lost and an extremely difficult way to track information.

**CURA** provides you with a permission levelled, secure and easy to use database allowing for quick and simple logging of data, a referral system, links to external resources, evidence and reports for external bodies.

The system collates information using the principals of the Assessment Framework this makes the process of completing a CAF assessment or Child Protection Referral easier as information is collated in a recognising manner.

### Features include:

- Intuitive software allowing quick and simple logging of concerns and niggles in a single central database
- Body mapping enabling user to pinpoint issues; bruises, burns, bites etc.
- Compare sibling issues and manage relationships using our Genogram feature
- Secure document storage; images, written statements, evidence
- User permission based clearance levels defined by the school, club or establishment ensuring confidentiality of data
- Effective referral system informing staff of issues based on various factors including; severity, accumulation, elapsed time
- Email notifications and alerts allowing for quick intervention
- Clearance level reports and graphs for tracking with exportable document option enabling you to print evidential logs for external bodies; OFSTED, CAF/CASS, FA and Police etc. and extract key data for your 'self evaluation process' securely
- Diarise events, meetings, discussions using private calendar
- Compatible with various management information systems and databases
